PRIYADHARSHINI BALAJI
AI Architect | Lead AI Engineer
Bengaluru, India | |
LinkedIn | GitHub | Website

SUMMARY
Results-driven AI Architect and Lead AI Engineer with 7+ years of experience designing and delivering enterprise-scale Generative AI, Agentic AI, automation, analytics, and cloud-native data engineering solutions across consumer goods, retail, financial services, logistics, and life sciences domains. Expertise in building production-grade AI systems leveraging Azure OpenAI, Microsoft Copilot Studio, LangChain, LangGraph, AutoGen, Databricks, Snowflake, Power Platform, and modern full-stack technologies, including Python, FastAPI, React.js, Node.js, and Java. Proven track record in architecting intelligent automation platforms, AI-driven conversational systems, multi-agent orchestration frameworks, enterprise reporting ecosystems, and large-scale regulatory automation solutions delivering measurable ROI through operational optimization, workflow automation, and real-time analytics. Strong experience in enterprise architecture, solution design, stakeholder management, technical leadership, DevOps, and cross-functional delivery for Fortune 500 clients.

SKILLS
Generative AI & Agentic AI: Azure OpenAI, OpenAI APIs, Microsoft Copilot Studio, Custom AI Agents, Agentic AI, MCP Agents, LangChain, LangGraph, AutoGen, Prompt Engineering, AI Orchestration, Conversational AI (Voice and Chat), GenAI Automation, Copilot Extensibility, Vertex AI LLM Integrations, AI Workflow Automation, RAG Workflows, Multi-Agent Systems, RLHF, Hugging Face, Google AI Studio, GitHub Copilot(Custom Skills, Agents & Instructions), Vector Databases (Pinecone, FAISS, ChromaDB), AI Governance & Responsible AI, Guardrails & Evaluation Frameworks, MCP, JSON-RPC, AI Observability, AI Security, Context Engineering, AI Evaluation and Harnesses Engineering
Data Engineering & Cloud: Databricks, Snowflake, Azure Data Factory (ADF), Azure Functions, Microsoft Fabric, Delta Lake, Azure SQL, SingleStore, SQL, Data Pipelines, REST APIs, Enterprise Data Engineering, ETL/ELT Pipelines, Data Integration, RDBMS, Elastic Search, Azure AI Search, Airflow, AWS (S3, EKS, Lambda, SageMaker, Glue, Bedrock), GCP, Azure AI Foundry, Apache Spark
Deployment & LLMops: Docker, Kubernetes, MLflow, GitHub Actions, Azure DevOps, Jenkins, Security Management, Monitoring, CI/CD
Programming & Full Stack Development: Python, FastAPI, Flask, Java, Struts, JavaScript, Node.js, React.js, Angular, TypeScript, Streamlit, HTML, CSS, Git, C, C++, API Integrations, Backend Services, Microservices, SQLAlchemy, APIGee, API Management
Automation & Low Code: Power Apps, Power Automate, AppSheet, SharePoint Integrations, n8n, PCF Controls, Power BI
Solution Architecture & Leadership: Solution Architecture, Enterprise Architecture, Stakeholder Management, Solution Estimation (Effort & Build Cost), Delivery Management, Technical Leadership, Team Mentoring, RFP & Proposal Support, Client Communication

---

EXPERIENCE

Lead AIML Engineer / AI Architect *August 2022 - Present*
Tiger Analytics, Bengaluru, India
Previous roles: [Senior Lead Engineer, Lead Engineer, Senior Engineer]

- Led enterprise GenAI and Agentic AI initiatives using Copilot Studio, Azure OpenAI, and custom AI agents to automate KPI validation, reporting workflows, and enterprise analytics across Power BI, Tableau, and PowerPoint ecosystems.
- Led a GitHub Copilot technical workshop for a European enterprise client, enabling 8+ projects through custom skills, instructions, and tools; evaluated GitHub repositories using an in-house AI assessment framework built using LLM Evaluator.
- Architected an AI-driven Conversational IVR using GPT-5, Copilot Studio, Dynamics 365, and Dataverse, automating 200K+ annual requests with ~97% accuracy while reducing operational overhead and eliminating human PII exposure.
- Built an AI Agent Assist platform leveraging Dynamics 365, AI Builder, and Dataverse, reducing Average Handle Time (AHT) by 20–30% and preventing 90K+ annual follow-up calls through real-time contextual intelligence.
- Established scalable AI orchestration and automation frameworks using LangChain, LangGraph, AutoGen, n8n, Databricks, Snowflake, Azure Functions, and Power Platform for enterprise workflow automation and intelligent decision support.
- Architected Power BI, Tableau, and Microsoft Fabric automation platforms reducing manual administration effort by up to 85% and saving ~260 operational hours annually through API-driven orchestration and governance automation.
- Designed and implemented a large-scale automation platform with 20+ Power Apps screens, 50 cloud flows, and 18 Databricks jobs, enabling automated regulatory reporting, audit-ready lineage, and enterprise-scale data governance.
- Delivered an enterprise-grade forecasting and reporting platform (Power Apps, Power Automate, Python FastAPI, Microsoft Fabric, Power BI) that automated end-to-end parsing, validation, and processing of business forecasting files, modernizing legacy Excel/SharePoint workflows into a centralized Latest Outlook (LO) ecosystem with real-time reporting, advanced error handling, and “What-if” simulation capabilities.
- Contributed to the development of a RAG-based intelligent document support platform (React.js, Python, Azure AI services) for a global Consumer Goods enterprise, enabling automated indexing and contextual retrieval of operational documents to resolve SME support tickets via AI-generated responses, human-in-the-loop validation, and continuous learning feedback loops.

- Directed a Fortune 500 intelligent automation platform using Power Apps, FastAPI, Azure SQL, Power BI, and enterprise data lakes, modernizing a 20-year legacy process through 150+ APIs and 114 workflows reducing 100% manual inputs.
- Built a production-grade trade automation platform integrating Power Platform, Azure Data Factory, and real-time synchronization engines, reducing operational costs by 20–30%, improving portfolio returns by 5–10%, and ensuring 100% compliance.
- Delivered additional enterprise platforms across business lines: a prospect intelligence platform (Power Apps, Snowflake, React, TypeScript) enabling real-time analysis and audit-ready governance controls; a centralized Report Publisher (Power Apps, Power BI, Power Automate, Dataverse) for automated report scheduling and self-service administration; and a buy/sell analytics platform (Power Platform, Azure Functions) automating market-share analysis and portfolio decision-making for backend operations.
- Developed an AI-powered ETL and incident intelligence platform integrating Snowflake, SQL Server, NLP models, AgilePoint, and RLHF pipelines to automate incident analysis, reduce false positives, and improve legal-risk classification accuracy.
- Architected a portfolio drift analytics and regulatory reporting platform using Microsoft Power Platform, Azure Data Factory, and Graph APIs, automating compliance reporting for 350+ investment funds and reducing operational costs by 50%.
- Contributed to 50+ enterprise projects, RFPs, solution estimations, and AI/data modernization initiatives across Fortune 500 clients in Consumer Goods, Retail, Financial Services, and Life Sciences domains.
- Led and mentored cross-functional engineering teams of 8+ developers while driving architecture governance, delivery excellence, stakeholder management, client communication, and enterprise-scale technical decision-making.

Senior Product Developer *April 2020 – July 2022*
Lumel Technologies formerly Known as Visual BI Solutions, Chennai, India
Previous roles: [Product Developer, BI Developer, BI Developer Trainee]

- Built enterprise-scale analytics and visual modelling platforms using React.js, Python, Node.js, FastAPI, and Java for real-time analytical processing and enterprise reporting workflows.
- Re-architected backend processing layers and frontend pipelines to improve scalability, responsiveness, and high-volume concurrent user handling.
- Optimized analytics performance and business insights using Power BI, SQL, SingleStore, and Oracle RDBMS across enterprise reporting datasets.
- Developed scalable data integration and backend automation pipelines integrating third-party APIs, enterprise databases, and analytics services for streamlined operational workflows.
- Improved enterprise application and backend processing performance by up to 83% through query optimization, workflow redesign, and efficient data transformation architectures.
- Designed a custom Power BI writeback framework using React.js, Node.js, Python, and custom visuals to enable seamless bidirectional data synchronization between Power BI dashboards and enterprise databases, eliminating manual data export/upload processes and significantly improving operational efficiency and user productivity.

Java Developer Intern *July 2019 – March 2020*
GoFrugal Technologies Pvt Ltd Merged into Zoho Corporation, Chennai, India

- Developed enterprise-grade applications using Java, Angular 8, SQL, and microservices architectures, building scalable backend services, frontend modules, and API-driven operational workflows for POS ecosystems.
- Delivered inbound/outbound enterprise integrations across business, application, and data management layers while optimizing API performance and supporting agile-based production delivery.

EDUCATION

Bachelor of Engineering (B.E.) – Computer Science and Engineering *2016 - 2020*
Anna University, Chennai, India, CGPA: 8.78 / 10

ACHIEVEMENTS

- Published 4 research papers in International and National Conferences.
- Finalist in Smart India Hackathon 2019.
- Recognized for leadership and technical excellence across enterprise engineering initiatives in Cognizant Student Club.
- Received Highest Committed student branch activist award – Computer Society of India

---

BEYOND WORK

- Actively builds AI, automation, and full-stack side projects exploring emerging technologies and enterprise AI patterns.
- Passionate about career guidance, mentoring, and helping aspiring engineers navigate careers in AI, software engineering
- Actively follows AI engineering communities to stay aligned with emerging technology trends.
